Economic and Market Update

Current Market Themes

- U.S. economic conditions are characterized by:
 - An improved pace of economic expansion
 - Muted inflation pressures, including tepid wage growth
 - Short-term optimism regarding the recent tax cuts
- Treasury yields continue to rise with the 2-year yield reaching the highest level since 2008. Meanwhile, longer-term yields are rising more slowly (or not at all) due to modest inflation, flattening the yield curve
 - Current Fed. Governor Jerome Powell was nominated to Chair the Federal Reserve after Janet Yellen's term expires next year. Powell is expected to continue Yellen's gradual approach towards monetary tightening
 - The Fed raised rates 3 times in 2017 and forecast 3 additional hikes for 2018
 - Fed balance sheet normalization will ramp up in 2018, based on the previously released plan
- Stock markets around the globe continue to march ever higher, even as volatility remains close to an all-time low
- The global growth outlook continues to brighten, led by the Euro-area
- Geopolitical risks continue to linger with potential hot spots in several parts of the globe

Economic Growth Remained Strong in 3rd Quarter

- Gross domestic product increased at an annualized rate of 3.2% in the third quarter of 2017. Growth in Q2 and Q3 was the fastest pace of expansion over two consecutive quarters since 2014. Growth has averaged 2.3% over the last four quarters.
- Q3 GDP reflected positive contributions from personal consumption, business investment, boosted primarily by a rise in private inventories, and exports which were offset by negative contributions from residential housing.

Source: Bloomberg as of Q3 2017. SAAR is seasonally adjusted annualized rate. Orange circles rising four-quarter averages

Labor Market Activity Slows Down in December

- The U.S. labor market added 148k jobs in December, well below expectations, while the headline unemployment rate held at 4.1%, the lowest level in 17 years
- The U.S. economy added 2.06 million jobs in 2017, the lowest number in seven years
- Average hourly earnings – an important gauge of wage growth – grew only 2.5% over the past 12 months

Total U.S. Job Gains by Year

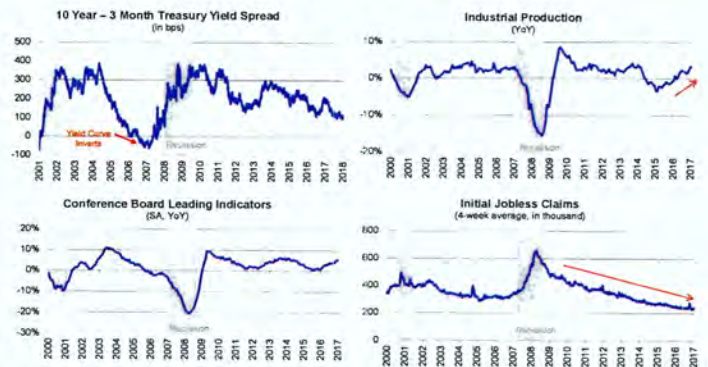

Inflation Steadies, but Outlook Remains Weak

- The core personal consumption expenditures (PCE) price index, the Fed's preferred measure of inflation, remained at 1.5% year-over-year in November. However, most Fed officials expect that inflation will gradually rise to reach the 2% target over time

U.S. Recession Indicators: Risks Appear Low in the Near Term

FOMC Statement Highlights

December

13

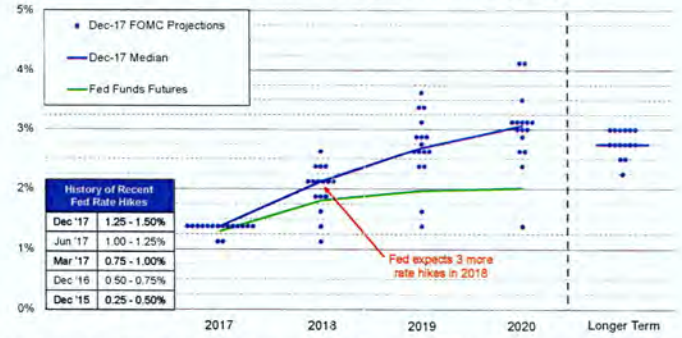

- Information received since the FOMC met in November indicates that the labor market has continued to strengthen and that economic activity has been rising at a solid rate. Averaging through hurricane-related fluctuations, job gains have been solid, and the unemployment rate declined further.
- Hurricane-related disruptions and rebuilding have affected economic activity, employment, and inflation in recent months but have not materially altered the outlook for the national economy.
- Inflation on a 12-month basis is expected to remain somewhat below 2 percent in the near term but to stabilize around the Committee's 2 percent objective over the medium term.

- The Committee decided to raise the target range for the federal funds rate to 1¼ to 1½ percent.
- The Committee expects that economic conditions will evolve in a manner that will warrant gradual increases in the federal funds rate.
- All voting members of the FOMC supported the monetary policy action, except for Charles Evans (Chicago) and Neel Kashkari (Minneapolis), who preferred at this meeting to maintain the existing target range for the federal funds rate.

Interest Rate Update

- Two-year treasury yields moved notably higher for the year ended December 31, 2017, the increase was most pronounced during the fourth quarter as markets responded to another rate hike by the Federal Reserve and the passage of the largest overhaul of the U.S. tax system in more than 30 years

Portfolio Characteristics and Investment Strategy

Portfolio Recap

- Yields continued to climb during the fourth quarter, with some short- and intermediate-term yields reaching highs not seen since 2008. However, in this era of gradually increasing interest rates, new purchases were weighed against the probability for further rate increases and their potential to diminish the market value of portfolio investments. In this flat yield curve environment, we emphasized maturity selection.
- We continued to maintain the portfolio's duration in line with the benchmark's duration to minimize return volatility.
- Strong investor appetite for high-quality alternatives to U.S. Treasuries caused the yield spreads on investment-grade fixed income sectors (relative to U.S. Treasuries) to tighten over the quarter, resulting in positive relative performance for non-Treasury sectors.
 - The yield spreads on federal agency securities vs. comparable-maturity Treasuries remained near historic lows, in some cases near zero, leading to diminished value of the agency sector.
 - Supranationals carried more yield spread and offered an attractive alternative in the high-quality government agency space.
 - Corporate yield spreads also remained near multi-year lows, as investors reaching for yield piled into a limited market supply of investment-grade securities, leading the corporate sector to deliver its ninth straight quarter of outperformance relative to U.S. Treasuries.
 - Short-term commercial paper (CP) and negotiable bank certificates of deposit (CDs) continued to offer value during the quarter. Although the Fed's December meeting caused CP/CD spreads to narrow, issuance has picked up and CP/CD yields have risen, widening the spread over similar-dated Treasuries.
 - Asset-backed securities (ABS) performed positively relative to Treasuries. Further spread compression in the ABS sector is likely to be limited given that current level spreads sit at historically tight levels.

2018 Investment Outlook and Strategy

- The U.S. economy is generally on strong footing heading into the new year, bolstered by expanding economic activity, a strong jobs market, and gains in housing. However, the continued rise of the domestic stock market, coupled with low volatility, may point to investor complacency.
- The Federal Reserve recently reiterated its intentions to continue to gradually increase rates into 2018. However, persistently low inflation readings may derail these plans. In this uncertain environment, we plan to adopt a duration-neutral stance but will continue to carefully monitor the portfolio's duration relative to the benchmark's duration, making adjustments as appropriate.
- Federal Agency issuance is expected to resume in the new year, but the overall level is expected to be slower than 2017. Given the flatness of the yield curve and narrow bullet agency spreads, we may seek value in callable agency securities where we find them advantageous.
- We will continue to focus on exposure to the corporate sector as well as other spread products to add value to the portfolios.
- The mortgage-backed securities (MBS) sector may experience some turbulence once the pace of tapering increases in future months. For that reason, we are generally avoiding additional MBS allocations at this time.
- Broad diversification across all investment-grade sectors remains a key component of our portfolio strategy. We will continue to monitor the markets and will make relative-value trades as appropriate in order to safely enhance portfolio earnings. However, as always, while we continue to seek opportunities to enhance the earnings, our priority will always be to maintain the safety and liquidity of portfolio investments.

IMPORTANT DISCLOSURES

The material is based on information obtained from sources generally believed to be reliable and available to the public, however, PFM Asset Management LLC cannot guarantee its accuracy, completeness or suitability. This material is for general information purposes only and is not intended to provide specific advice or a specific recommendation. All statements as to what will or may happen under certain circumstances are based on assumptions, some, but not all of which, are noted in the presentation. Assumptions may or may not be proven correct as actual events occur, and results may depend on events outside of your or our control. Changes in assumptions may have a material effect on results. Past performance does not necessarily reflect and is not a guaranty of future results. The information contained in this presentation is not an offer to purchase or sell any securities.

- Market values that include accrued interest are derived from closing bid prices as of the last business day of the month as supplied by Interactive Data, Bloomberg, or Telerisk. Where prices are not available from generally recognized sources, the securities are priced using a yield based matrix system to arrive at an estimated market value.
- In accordance with generally accepted accounting principles, information is presented on a trade date basis. Forward settling purchases are included in the monthly balances, and forward settling sales are excluded.
- Performance is presented in accordance with the CFA Institute's Global Investment Performance Standards (GIPS). Unless otherwise noted, performance is shown gross of fees. Quarterly returns are presented on an annualized basis. Returns for periods greater than one year are presented on an annualized basis. Past performance is not indicative of future returns.
- Bank of America/Merrill Lynch indices provided by Bloomberg Financial Markets.
- Money market fund basis are included in performance and duration computations.
- Standard & Poor's is the source of the credit ratings. Distribution of credit rating is exclusive of money market fund/GIP holdings.
- Callable securities in the portfolio are included in the maturity distribution analysis to their stated maturity date, although they may be called prior to maturity.
- MBS maturities are represented by expected average life.

GLOSSARY

- ACCRUED INTEREST:** Interest that is due on a bond or other fixed income security since the last interest payment was made.
- AGENCIES:** Federal agency securities and/or Government sponsored enterprises.
- AMORTIZED COST:** The original cost of the principal of the security is adjusted for the amount of the periodic reduction of any discount or premium from the purchase date until the date of the report. Discount or premium with respect to short-term securities (those with less than one year to maturity at time of issuance) is amortized on a straight line basis. Such discount or premium with respect to longer-term securities is amortized using the constant yield basis.
- BANKERS' ACCEPTANCE:** A draft or bill of exchange accepted by a bank or trust company. The accepting institution guarantees payment of the bill as well as the issuer.
- COMMERCIAL PAPER:** An unsecured obligation issued by a corporation or bank to finance its short-term credit needs, such as accounts receivable and inventory.
- CONTRIBUTION TO DURATION:** Represents each sector or maturity range's relative contribution to the overall duration of the portfolio measured as a percentage weighting. Since duration is a key measure of interest rate sensitivity, the contribution to duration measures the relative amount or contribution of that sector or maturity range to the total rate sensitivity of the portfolio.
- DURATION TO WORST:** A measure of the sensitivity of a security's price to a change in interest rates, stated in years, computed from cash flows to the maturity date or to the put date, whichever results in the highest yield to the investor.
- EFFECTIVE DURATION:** A measure of the sensitivity of a security's price to a change in interest rates, stated in years.
- EFFECTIVE YIELD:** The total yield an investor receives in relation to the nominal yield or coupon of a bond. Effective yield takes into account the power of compounding on investment returns, while nominal yield does not.
- FDIC:** Federal Deposit Insurance Corporation. A federal agency that insures bank deposits to a specified amount.
- INTEREST RATE:** Interest per year divided by principal amount and expressed as a percentage.
- MARKET VALUE:** The value that would be received or paid for an investment in an orderly transaction between market participants at the measurement date.
- MATURITY:** The date upon which the principal or stated value of an investment becomes due and payable.
- NEGOTIABLE CERTIFICATES OF DEPOSIT:** A CD with a very large denomination, usually \$1 million or more, that can be traded in secondary markets.
- PAR VALUE:** The nominal dollar face amount of a security.

GLOSSARY

- PASS THROUGH SECURITY:** A security representing pooled debt obligations that passes income from debtors to its shareholders. The most common type is the mortgage-backed security.
- REPURCHASE AGREEMENTS:** A holder of securities sells these securities to an investor with an agreement to repurchase them at a fixed price on a fixed date.
- SETTLE DATE:** The date on which the transaction is settled and monies/securities are exchanged. If the settle date of the transaction (i.e., coupon payments and maturity proceeds) occurs on a non-business day, the funds are exchanged on the next business day.
- TRADE DATE:** The date on which the transaction occurred, however, the final consummation of the security transaction and payment has not yet taken place.
- UNSETTLED TRADE:** A trade which has been executed, however, the final consummation of the security transaction and payment has not yet taken place.
- U.S. TREASURY:** The department of the U.S. government that issues Treasury securities.
- YIELD:** The rate of return based on the current market value, the annual interest receipts, maturity value, and the time period remaining until maturity, stated as a percentage on an annualized basis.
- YTM AT COST:** The yield to maturity at cost is the expected rate of return based on the original cost, the annual interest receipts, maturity value, and the time period from purchase date to maturity, stated as a percentage on an annualized basis.
- YTM AT MARKET:** The yield to maturity at market is the rate of return based on the current market value, the annual interest receipts, maturity value, and the time period remaining until maturity, stated as a percentage on an annualized basis.

Andrea Viall, Senior Marketing Representative

Recommended Changes and Potential Benefits

- Recommended Changes:**
 - Added ratings for local government investment pools (LGIPs) in the ratings summary chart
 - Changed the Federal Agency and Instrumentality language to expressly follow state law
 - Changed all credit-related exposure maximums to 35%
 - Added Negotiable Certificates of Deposit as an authorized investment
 - Updated language pertaining to repurchase agreements
 - Updated language pertaining to money market funds (MMFs) and local government investment pools
 - Streamlined section on safekeeping and custody standards
- Potential Benefit:**
 - Clarifies the differences between long-term ratings, short-term ratings, and LGIP ratings
 - Permits Supranational securities more clearly, an increasingly important Agency for public sector portfolios
 - Makes consistent all credit-related instrument exposure
 - Increases diversification options in the portfolio
 - Modernizes repurchase agreement language
 - Makes policies regarding MMFs and LGIPs more accurate
 - Removes outdated or ambiguous requirements
